### **Brief Case Notes**

The following gives an overview of some of the work done :-

#### **A wholesaler of laboratory supplies**

With an expansion of its business in Europe, this Company was looking to open a new distribution centre in Germany. Given a brief specification of requirements, THE LOGISTICS BUSINESS was able, in a short space of time, to use its international connections to seek out suitable premises and produce a short list of warehouses which met the Client's needs.

#### **A UK based supplier of scientific equipment**

The costs of distributing product throughout Europe had grown significantly for this Company and customer service standards were falling. THE LOGISTICS BUSINESS was given the task of recommending a new approach to managing the supply chain. After an in depth analysis of order profiles, recommendations were made to eliminate weekly consignments to the national markets and replace these with a system of direct deliveries from the UK warehouse using overnight carrier services. The recommendations were accepted and the project has proved to be an outstanding success with overall reduced inventory levels and reduced shipping costs.
